

Get latest firmware version for charge controllers

If you need the latest available firmware for your Ensto Chago charger, find it below.

 You can use USB stick based method (see [Update firmware with USB stick](#)) or OCPP FirmwareUpdate request to update the software. You can only go to a newer version, not back to an older version, this is by design.

 Note: In case the charger is connected to any back-end, before updating please check with the back-end operator what is the latest approved firmware version that can be used with their back-end.

Gen 1 charger Version	Debian package	Notes	Gen 2 version (charger with new controller) Debian package
5.32.0-18892	firmware_5.32.0-18892.deb	Common improvements. Postponed.	firmware_5.32.0-18892_ICC1324.deb
5.29.4-13558	firmware_5.29.4-13558.deb	Replaces 5.29.3fw which had one update related bug.	
5.29.3-13498	firmware_5.29.3-13498.deb	Fixes connectivity issues.
